

Seed module

Training a model from scratch

Select a **seed type** (1), upload **the training images** and their corresponding **YOLO annotation files** (.txt). Configure the training parameters in (2) as needed. A higher epoch count generally improves model performance but increases training time. Afterwards, click **Start Training** (3).

Training

Train seed detection models

New Training Job

Select a seed species and start training. Training that runs on CPU may take a long time.

TRAINING MODE

Retrain model

Improve an existing trained model

Train new model

Create a brand new model from scratch

1. CHOOSE SEED TYPE

PEH

PHYCA

VAU

CAT

+ Add new seed type

2. TRAINING DATA

New dataset for PEH

Upload the full dataset for this new species

2 file(s) selected

Retrain an existing model

Select a **model version** from the list to fine-tune (5). Only the **active** model version for each species is shown.

Training
Train seed detection models

New Training Job
Select a seed species and start training. Training that runs on CPU may take a long time.

TRAINING MODE

Retrain model
Improve an existing trained model

Train new model
Create a brand new model from scratch

1. CHOOSE SEED TYPE AND MODEL

PEH **PHYCA** **VAU** **CAT**

PHYCA-14 active *PHYCA*
MAE 1.78 · F1 0.73 · 216 samples 5

Upload new training images and annotation files following the same procedure as for scratch training (6). These files will be added to the model's existing dataset, so **previously used** training images should be avoided. Adjust the parameters as needed, and click **Start Training**.

Manage model versions

Once a training job is completed, the new model version becomes available on the **Models** page (7). By default, the most recently trained model per species is set as the **active model**. Click (8) to activate a different version. (9)

Ecosia < **Models**
Trained model versions per seed species

C clausev [→]

To manually upload a model, click (9). Enter the species, version name, add an optional description, and upload either:

- A single model file (.pt / .pth)
- A **training run folder** (containing model + charts)

Upload existing model ×

Species *
e.g. phyca
Pick an existing species or type a new one. Drives the grouping on this page.

Version name *
e.g. yolo-v1
Used as the filename and must be unique.

Description
Optional notes on dataset, training, etc.

Source *
☒ Single weights file ☐ Training run folder

Drop a .pt / .pth file or click to browse
.pt / .pth — metadata (img_size, arch, epoch) is auto-extracted if present.
